<i>List of Figures, Tables and Boxes</i>	xiii
<i>Preface</i>	xv
1 Introduction	1
What Is Research?	2
What Is Science?	2
<i>Publicness</i>	3
<i>The scientific method</i>	4
Why Research Design?	9
What Is Political Science?	13
The Purposes of This Text	16
<i>Who is this text for?</i>	18
The Way Ahead	20
2 Types of Research and Research Questions	23
Normative and Positive Research	24
Theoretical and Empirical Research	28
Descriptive, Predictive, and Explanatory Research	30
<i>Description</i>	31
<i>Prediction</i>	33
<i>Explanation</i>	35
Theory Generation, Theory Testing, and Theory Application	37
<i>Theory generation</i>	38
<i>Theory testing</i>	39
<i>Theory application</i>	40
Alternative Approaches	42
Choosing a Topic	44
Sharpening the Research Question	51
Further Reading	54
3 Theory in the Research Process	56
Paradigms, Theories, Models, and Interpretations	56
The Functions of Theory	58
The Structure of Theory	62
Developing Explanatory Theory	67
<i>Informal analysis</i>	68
<i>Mathematical analysis</i>	69

<i>Game theory</i>	71
<i>Agent-based modelling</i>	73
<i>Statistical models</i>	76
What Makes a Good Theory?	77
<i>Truth</i>	77
<i>Parsimony</i>	78
<i>Generality</i>	78
<i>Precision</i>	79
Practical Considerations about Theory	80
Further Reading	82
4 Concepts and Operationalization	83
Concepts	83
<i>Defining concepts</i>	84
<i>The nature of concepts</i>	86
<i>The structure of concepts</i>	89
<i>Relationships between concepts</i>	92
<i>Definitions</i>	94
Conceptualization	95
<i>Classification (intensional)</i>	96
<i>Evaluating concepts and classifications</i>	99
<i>Classification and measurement</i>	100
Operationalization	100
Pitfalls of Conceptualization	102
<i>Conceptual profusion</i>	102
<i>Conceptual stretching and functional equivalence</i>	103
<i>The legal-bureaucratic context</i>	103
<i>Contested concepts</i>	104
Summing Up	105
Further Reading	105
5 Measurement and Description	107
Preliminaries	107
A Glossary of Research Terms	109
<i>What is a case?</i>	109
<i>Cases, samples, and populations</i>	111
Measurement Reliability and Validity	117
Measurement Strategies in Political Science	119
<i>Measuring policy positions of political parties</i>	120
Descriptive Inference	123
Goals of Descriptive Research	124
Describing Populations	125
<i>Univariate descriptions of populations</i>	125

<i>Multivariate descriptions of populations</i>	134
<i>Describing associations between variables</i>	138
Describing Individual Cases	140
<i>Participant observation and ethnographic fieldwork</i>	141
<i>Archival historical research</i>	143
Further Reading	144
6 Explanation and Causality	145
Types of Explanation	145
<i>Covering laws</i>	146
<i>Probabilistic-nomological explanation</i>	147
<i>Functional explanation</i>	148
<i>Intentional explanations</i>	149
<i>Mechanistic causal explanations</i>	150
Notions of Causality	153
<i>A counterfactual definition</i>	153
<i>General patterns and particular facts</i>	154
<i>Complete and partial, deterministic and probabilistic explanations</i>	155
<i>Prospective and retrospective causation</i>	156
<i>Association, prediction, and causation</i>	156
<i>Intervention, manipulation, and causation</i>	157
<i>Summing up</i>	158
Causal Inference	160
<i>The problem</i>	160
<i>Partial solutions</i>	161
Further Reading	164
7 Experimental Designs	166
The Basics of Experimental Research	167
<i>Experiments, randomized controlled trials, and quasi-experiments</i>	167
<i>The goals of experimental research</i>	168
<i>The logic of experimental research</i>	169
<i>Validity</i>	173
<i>A hypothetical example</i>	173
The Design of Experimental Research	176
<i>Level of analysis</i>	176
<i>Sample size</i>	177
<i>Blocking and randomization</i>	179
<i>The experimental setting</i>	181
Complications	182
The Analysis of Experimental Data	186

Experiments in Political Science and Public Policy Research	190
<i>Survey experiments</i>	190
<i>Field experiments</i>	192
<i>Social network-based experiments</i>	194
<i>Laboratory experiments</i>	195
Limits to Experimental Research	196
Further Reading	197
8 Large-N Designs	200
The Logic of Large-N Research	201
<i>An example</i>	202
Pitfalls on the Way from Association to Causation	205
Conditions for Causal Inference	209
Strategies for Causal Inference in Large-N Research	211
<i>Natural experiments</i>	211
<i>Instrumental variables</i>	216
<i>Mediation analysis</i>	219
<i>Conditioning</i>	220
<i>Summary and additional approaches</i>	225
Common Designs for Causal Inference	227
<i>Time series</i>	227
<i>Cross-sectional designs</i>	231
<i>Panel designs</i>	232
<i>Multilevel designs</i>	236
Estimating Causal Effects	237
<i>Varieties of association</i>	237
<i>Size of the association</i>	238
<i>Uncertainty and statistical significance</i>	239
<i>Linearity and beyond</i>	242
<i>Limited outcomes</i>	243
The Design of Large-N Observational Research	243
<i>Variable selection</i>	244
<i>Case selection</i>	247
<i>Levels of analysis and observation</i>	253
<i>Measurement error and missing data</i>	254
Uses of Large-N Research	255
Further Reading	256
9 Comparative Designs	258
The Logic of Small-N Comparative Research	259
The Design of Small-N Comparative Research	262
<i>Most similar systems design I</i>	262
<i>Most similar systems design II</i>	266

<i>Most different systems design</i>	268
<i>Beyond the most simple designs</i>	269
Qualitative Comparative Analysis	269
<i>Necessary and sufficient conditions</i>	270
<i>Boolean minimization: a simple example</i>	271
<i>A slightly more complex example: the curse of dimensionality, logical remainders, and inconsistency</i>	274
<i>Case and variable selection in QCA</i>	279
<i>Extensions and alternatives</i>	280
Limits of Small-N Comparative Research	282
Further Reading	283
10 Single-Case Study Designs	285
What Is a Case?	286
Uses of Single-Case Designs	288
<i>Theory application and abductive explanation</i>	288
<i>Theory testing: outcomes and mechanisms</i>	290
<i>Exploration, theory generation, and description</i>	291
Selecting Evidence to Observe	294
Conducting Case Study Research	297
<i>Process tracing</i>	297
Limitations of Single-Case Designs	304
Further Reading	307
11 Mixed and Nested Designs	310
A Pragmatic Approach to Political Science Research	310
Mixing and Nesting	312
Uses of Mixed Research Designs	313
<i>Triangulation and cross-validation</i>	313
<i>Validating theoretical and methodological assumptions</i>	314
<i>Exploring and validating causal mechanisms</i>	315
<i>Building theories before testing theories</i>	316
<i>Testing explanations with cross-case and within-case evidence</i>	316
Selecting Cases in Mixed and Nested Designs	318
<i>Case selection when combining large-N and single-case designs</i>	318
<i>Case selection when combining small-N and single-case designs</i>	320
<i>Case selection for composite projects</i>	322
Mixing Methods at the Level of Research Programs	323
Critiques of Combining Research Methods and Designs	325
Further Reading	326

12 Communicating Research	328
The Outputs of the Research Process	329
<i>Styles of academic writing</i>	330
<i>Structuring research proposals</i>	331
<i>Structuring research reports</i>	333
The Ethics of Political Science Research	335
<i>Research integrity</i>	335
<i>Political science and the broader society</i>	340
The Role of Political Science	342
<i>References</i>	345
<i>Index</i>	368

List of Figures, Tables and Boxes

Figures

1.1	An example of a Rorschach inkblot (Number 1)	9
1.2	A word cloud of the 60 most popular keywords in political science	15
2.1	Research and the normative, theoretical, and empirical domains	25
2.2	Theory development and the research process	29
2.3	A taxonomy of major types of research in political science research	30
3.1	Imposition of and reactions to economic sanctions	61
4.1	The structure of concepts	89
4.2	Conceptualization and operationalization	96
4.3	A taxonomy of classification products	99
5.1	Types of measurement	108
5.2	Cases, samples, and populations	113
5.3	Examples of empirical distributions	130
5.4	Example of cluster analysis	136
5.5	Example of a multi-dimensional scaling plot	137
5.6	Example of a network visualization	138
6.1	Example of a causal diagram	163
8.1	Causal diagram illustrating a simple model of political revolutions	203
8.2	Causal graphs: what can produce an observed association between two variables X and Y?	206
8.3	A confounder concealing a true causal relationship	208
8.4	Causal identification using instrumental variables represented in causal diagrams	216
8.5	Causal identification using mediating variables represented in causal diagrams	219
8.6	A causal model of government attention	221
8.7	Causal identification using conditioning represented in causal diagrams	223
8.8	Examples of time series data	229
8.9	An example of panel data and the difference-in-differences estimator	233
11.1	A hypothetical example of a strong relationship between GDP per capita and government effectiveness, with outliers	318

Tables

4.1	Various meanings of the term ‘classification’	97
5.1	Types and goals of description	125
6.1	Types of scientific explanation	151
6.2	From association to causality: different shades of meaning	159
7.1	Experimental and observational research designs	168
7.2	Types of errors	179
7.3	Types of experimental subjects	183
7.4	Different definitions of treatment effects	187
8.1	Example of a (hypothetical) dataset collected in the framework of a large-N study	203
8.2	Relative frequencies for the cases listed in Table 8.1	204
8.3	Example of association generated by a shared cause	206
8.4	Example of association generated by a shared effect	207
8.5	Types of observational designs	228
8.6	Blocking by design	234
8.7	A guide to selecting which variables to include	245
9.1	Most similar systems design (I)	263
9.2	A slightly more complex most similar systems design	265
9.3	Most similar systems design (II)	267
9.4	Most different systems design	268
9.5	Summary of cases	272
9.6	Truth table based on the cases presented in Table 9.5	273
9.7	Summary of cases: a more complicated example	275
9.8	Truth table based on the cases in Table 9.7	276
10.1	Types of evidence and their implications	296

Boxes

2.1	Tips for choosing a research topic	51
2.2	Tips for improving a research question	54
3.1	What do theories do?	62
6.1	Varieties of causal(?) statements	154
6.2	General steps for causal inference	162
7.1	Steps in experimental research	170
8.1	What can produce an observed association between two variables X and Y?	205
8.2	Main strategies for causal inference in observational large-N research	226
12.1	A sample structure of a research proposal	332
12.2	A sample structure of a research paper	334
